PRODUCT PHILOSOPHY

I believe that product management is changing rapidly with the emergence of AI Assisted Development. I'm part of a new generation of PMs looking to compress product feedback by directly building, testing and iterating ideas before scaling engineering investment. By combining user feedback, analytics, and hand on prototyping, I use AI tools to validate the hypothesis, accelerate product cycles and make decisions based on real world feedback rather than static requirements documents.

EDUCATION

M.S. Analytics (Online) | Georgia Institute of Technology | Fall 2026, Incoming

B.S. Information Science | 3.98 GPA | Cyber Club President | U of Maryland, College Park | Dec 2025

United States Air Force Academy | Honorable Discharge | 2019 - 2021

EXPERIENCE

Founding Team Member | Avera Technologies (Student Startup)

Remote | Jan 2026 - Apr 2026

- Sourced 200+ interview candidates and conducted 50+ customer discovery sessions with patients and Korean healthcare providers to identify adoption barriers and validate market demand for a medical tourism platform.
- Synthesized bilingual stakeholder findings into prioritized user stories and acceptance criteria to guide product roadmap and MVP feature scope decisions.
- Sized a \$2.3B medical tourism market across 3 target markets, analyzed 4 direct competitors, and identified key compliance requirements to define product strategy and evaluate commercial feasibility.
- Provided a risk-adjusted go/no-go recommendation to the founding team based on customer, market, and financial analysis, halting development and avoiding investment in a heavily regulated market with limited differentiation.

Data Analyst Consultant | iConsultancy, UMD | Client: Community Forklift

College Park, MD | Aug 2025 - Dec 2025

- Conducted current-state process analysis by mapping donor management and transaction workflows end-to-end; created user journey maps from stakeholder interviews to visualize pain points and directly drive workflow redesign decisions.
- Synthesized quantitative donation trends with qualitative stakeholder findings into an executive briefing delivered to client leadership for strategic planning and long-term strategic decisions.

Volunteer | iSchool Academic Advising Chatbot | UMD IT Department

College Park, MD | Oct 2025 - Dec 2025

- Independently sought and secured access to an active AI implementation project; participated in bi-weekly standups with the IT team to track progress and align on product iterations.

- Drove quality improvements by partnering cross-functionally with faculty and IT teams to expand domain-specific response context based on stakeholder expectations.
- Defined iterative improvement criteria using quantitative user feedback signals, improving satisfaction from a 65/35 to 95/5 like-to-dislike ratio over the engagement period.

IT Student Helpdesk Technician | USG Office of Information Technology

Rockville, MD | Apr 2025 – Dec 2025

- Reduced repeat incident volume ~20% by performing root cause analysis on support ticket data and authoring a knowledge base to standardize resolution steps for a recurring Windows driver issue across the user population.
- Maintained endpoint coverage for ~200 users by processing RBAC provisioning requests and deploying security tools including GlobalProtect VPN and CrowdStrike EDR.

Student Intern | Office of Planning and Development, CNMI Government

Saipan, MP | Jan 2022 - Jun 2022

- Supported enterprise product delivery across an 8-agency ERP implementation, contributing to requirements gathering, UAT execution, data migration, and go-live coordination with zero data loss or service disruption.
- Elicited and documented department-specific permitting workflow requirements from 8 agency Subject Matter Experts, enabling customized EnerGov system configuration for each agency's unique process.
- Coordinated with Tyler Technologies consultants to deliver agency-specific milestones on schedule and trained all 8 SMEs on new workflows ahead of production rollout.

Project

Reviewstar.cv | AI Interview Coaching Platform | Oct 2025 – Present

Python, FastAPI, PostgreSQL, Next.js, AWS, Stripe

- Defined product vision and strategy for an AI-powered interview coaching platform; shipped 7 product updates while owning the full lifecycle from discovery through prioritization, development, and iterative release.
- Validated and sunset an ad-supported monetization model based on low engagement signals; pivoted to a subscription-first strategy after analyzing UX tradeoffs and user behavior data.
- Prioritized and delivered a feature roadmap sourced directly from user feedback and requests: live performance database, enhanced grading metrics, expanded question pools, badge system, and daily login credit rewards.
- Designed and launched gamification features like streaks, badges, and daily credits, driving 40% active user engagement with the streak system across release cycles.

SKILLS

Product Management: Product lifecycle ownership, user story and requirements definition, MVP scoping, roadmap prioritization, acceptance criteria, agile delivery, hypothesis-driven development

Certifications: Google AI Fundamentals, CompTIA Security+, AWS Certified Cloud Practitioner

Research and Discovery: Customer discovery, user research, competitive analysis, market sizing, user journey mapping, process mapping, stakeholder interviews

Data and Insights: Product analytics, KPI definition, funnel analysis, feature tracking, Tableau, PowerBI, Python, SQL

Leadership: Cross-functional alignment, executive communication, risk identification, program management, Jira, Google Workspace
